1. Product introduction

General

Monitoring of typical water quality parameters as well as precise control of disinfectant addition or pH adjustment is essential for many water treatment processes. Bus interface as well as data logging functionalities and intuitive user interface are a must for M&C today.

The new Grundfos by s::can DID systems are the perfect combination of s::can's state-of-the-art digital sensor technology and Grundfos' experience in PID controlling of dosing and disinfection processes. DID systems are designed to match perfectly with Grundfos dosing pumps, gas dosing systems as well as systems for the generation and dosing of chlorine dioxide and hypochlorite.

Characteristics and main features

DID systems are available as pre-assembled systems with bypass flow cell or as kits for applications with tank-immersed sensors.

Variants with bypass flow cell are intended for monitoring and control of disinfectants, pH, ORP, conductivity and temperature. The water flow through the cell is kept at an appropriate level by a flow restrictor. Lack of water is detected by a flow switch and leads to an alarm. A shut-off ball valve and a sampling cock complete the hydraulic installation, which is compatible with Grundfos standard hoses.

System configurations for tank immersion are available with up to 2 sensors for pH, ORP and conductivity, and always include temperature measurement. These variants allow measurement of water parameters directly in the tank or basin without the need for a bypass line and flow cell. The control unit can either be fixed directly at a wall or back plate, or mounted on a DIN rail in a cabinet.

Sample water extraction devices

Sample water extraction devices are used to extract a part of the main water flow.

Sample water extraction devices consist of:

- An extraction pipe that is immersed into the water flow to be measured.
 - The pipe can be cut to length to match installation conditions on site.
 - With R 1/2" installation connection
- A ball valve to stop the water flow to the DID system.

Sample water extraction pump

In case the installation on site does not allow free water flow to the DID system, a sample water extraction pump can be used to transport the water.

- Connection DN8
- Mains voltage and frequency 220 V, 50 Hz
- Power consumption approx. 40 W

Sample water extraction pump, up to 35 l/h	95701524

External water filters

An additional external water filter might be necessary when more dirt is expected in the water to be measured.

Note: all DID systems with bypass flow cell have an integrated water filter.
