# **VV40 - Internal Gear Pumps**

**Bracket** is one unit. This puts the pump packing or seal between the thrust bearing and bracket bushing, keeping movement to a minimum for longer seal life.

Multiple **Configuration** options conform to your system design with a simple change to casing orientation and/or shaft rotation.

**Bearing Housing** 

assembly is designed for ease of maintenance without lengthy downtime.

**Stuffing Box** is designed to easily accept alternate sealing methods.

**Ports** are either NPT or flange type.

**Bearing** is a double row ball bearing to handle thrust loads. (VV40Q and VV40QS sizes have two taper roller bearings.

www.SUMMITPUMP.com

**End Clearance** is externally set by rotating the bearing housing.

**Bushings** are either bronze or carbon graphite and reduce moving parts and maintenance.

**Standard Gland** will accommodate packing or a component seal.

**Internal Pressure Relief Valve** is standard on all pumps. Pressure setting is calibrated at the factory.

# FEATURES & BENEFITS

**Internal gear pumps** offer a wide range of benefits. Although, they do not handle solids, they are a good option for abrasive applications.

**Shear sensitive fluids** can be pumped with this type of pump. Fluids are transferred in "chunks" as the gears rotate and very little pumped fluid is actually sheared. If needed, operating at slower speeds, selecting a larger pump or adjusting end clearances are ways to adapt to higher shear sensitive materials.

### CONFIGURABILITY

**Installation configurations** are obtainable since the VV40 pumps are designed for adaptability. There are 16 possible configurations by simply choosing a casing orientation and shaft rotation (Notice relief valve positions). Orientation

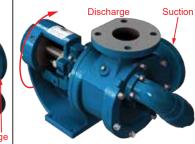

The images to the right are four main configurations. Standard configuration is right hand orientation and clockwise rotation, unless otherwise stated on the purchase order.

Material options are cast iron, ductile iron, steel and stainless steel. NPT or flanged ports are determined by pump size and material. Consult your local Summit Pump, Inc. Distributor for specific details.

#### **Shaft Rotation** (As viewed from motor)

### **VV40 Specifications**

## **DESIGN PRINCIPAL**

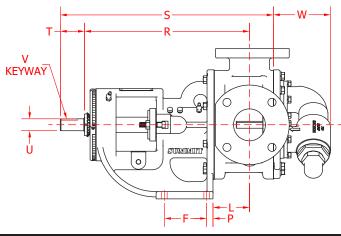

The VV40 series is a positive displacement internal gear type pump. The outer gear (rotor) is driven which turns the inner gear (idler) with its centerline offset from the rotor. This generates expanding volume near the suction port and contracting volume near the discharge expelling the pumped product.
