

Versatile, Reliable Pumps for a Wide Range of Applications

- Pumps the full spectrum of low-to-high viscosity fluids.
- Features a seal-less design and horizontal disk check valves that enable the pump to handle abrasives and particulates that might damage or destroy other types of pumps.
- Simple, compact design reduces initial investment and lowers maintenance costs.
- Operational efficiencies reduce energy costs.
- Able to run dry without damage (or additional maintenance) to the pump in case of accident or operator error.
- Tolerates non-ideal operating conditions.
- Minimizes maintenance and downtime because there are no seals, packing or cups to leak or replace.

# D35 Series

Maximum Flow Rate: 36.5 gpm (138 l/min) Maximum Pressure: 1500 psi (103 bar) for Metallic Pump Heads

D35 with Brass pump head

D35 with Cast Iron pump head

D35 with Stainless Steel pump head and ANSI flanges

| Oil Capacity                       |           | 5.0 US quarts (4.7 liters)              |                            |  |  |  |
| Weight                             |           |   |                            |  |  |  |
| Metallic Heads:                    |           | 240 lbs. (109 kg)                       |                            |  |  |  |
|                                    |           |   |                            |  |  |  |

#### **Calculating Required Power**

| $\frac{100 \times \text{rpm}}{63,000}$ | +                            | = | electric motor hp |
|--|------------------------------|---|-------------------|
| 100 x rpm<br>84,428                    | + $\frac{l/\min x bar}{511}$ | = | electric motor kW |

When using a variable frequency controller (VFD) calculate the hp or kW at minimum and maximum pump speed to ensure the correct hp or kW motor is selected. Note that motor manufacturers typically de-rate the service factor to 1.0 when operating with a VFD.

### Net Positive Suction Head (NPSHr)

Note: Positive inlet pressure required with PTFE diaphragms.

#### Self-priming:

Each Hydra-Cell pump has different lift capability depending on model size, cam angle, speed, and fluid characteristics. To ensure that your specific lift characteristics are met, refer to the inlet calculations regarding friction, and acceleration head losses in your Hydra-Cell Installation & Service Manual. Compare those calculations to the NPSHr curves above.

## **D35 Series Representative Drawings**

### D35 Models with NPT Inlet/Outlet Ports Inches (mm)

## D35 Models with SAE Flange Inlet/Outlet Ports Inches (mm)

Note: Contact factory for additional drawings of specific models and configurations.

## D35 Models with ANSI Flange Inlet/Outlet Ports Inches (mm)

### **Valve Selection**

A seal-less C64 Pressure Regulating Valve is recommended for Hydra-Cell D35 pumping systems, especially for highpressure requirements or when handling dirty fluids.

A C24 Pressure Regulating Valve provides a capable, lower-cost alternative to C63 valves for Hydra-Cell D35 pumping systems.

For complete specifications and ordering information, consult the Hydra-Cell Master Catalog.
